

Reflection three-step

The reflection three-step combines the method of guided reflection with linguistic structures and pursues two goals: Students get to know reflection as a learning medium and at the same time practise scientific formulation.

The reflection three-step can be used in all phases of a course. In order to achieve the greatest possible effect, regular use is recommended. For example, the last five minutes of a seminar could be used for reflection. The reflections can be used as a starting point for the next seminar session.

3 questions

The three-step reflection process consists of three questions:

- 1) What happened? What happened? What was the reaction?

Purpose: Description of the situation/given
circumstances Linguistic form: neutral, descriptive

- 2) Yes, and? How would you rate the situation? What did you learn from it? What did you realize about it? What is important to you? Why?

Purpose: To take a stand on what has happened.
Linguistic form: personal, evaluative verbs, argumentative

- 3) And now what conclusions do you draw? What would you like to do differently/the same way? What questions arise for you? What would you like to learn more about?

Purpose: Change of perspective: Thinking into the
future Linguistic form: argumentative
